

Lena Haddad

lena.haddad@example.com | Languages: Arabic, English, French | Track: Robotics | Experience: 3 years

PROFESSIONAL SUMMARY

Lena Haddad is a highly motivated robotics engineer with a strong passion for autonomous systems and cutting-edge technologies. She has a solid foundation in programming and robotics, with hands-on experience in designing and implementing robotic systems. Lena is eager to contribute her skills to innovative projects in the automotive industry.

EDUCATION

{"degree": "Master's in Mechatronics Engineering", "university": "American University of Beirut (AUB)"}

SKILLS

Python | C++ | ROS (Robot Operating System) | Machine Learning | Deep Learning | SLAM (Simultaneous Localization and Mapping) | Computer Vision | OpenCV | TensorFlow | PyTorch | MATLAB | Arduino | Embedded Systems | Linux | Git | Team Collaboration | Problem Solving | Adaptability | Agile Methodologies | Time Management | Technical Writing | Critical Thinking | Autonomous Vehicles | Robot Kinematics | Path Planning Algorithms | Object Detection | Sensor Fusion | Communication Skills | 3D Printing | Prototyping

EXPERIENCE

Lena Haddad is a robotics engineer with 3 years of experience in designing and developing autonomous robotic systems. She worked on a project to implement Simultaneous Localization and Mapping (SLAM) algorithms for indoor navigation robots using ROS. Lena also contributed to the development of a computer vision-based object detection system using TensorFlow and OpenCV for a warehouse automation project. As part of a university research initiative, she developed a path planning algorithm for unmanned ground vehicles, achieving a 15% efficiency improvement in navigation. She has hands-on experience with Arduino and embedded systems for prototyping robotic solutions and has worked extensively with Python and C++ for algorithm implementation. Lena is skilled in sensor fusion techniques, integrating data from LiDAR, IMU, and cameras to improve robot perception. She thrives in collaborative environments and has experience working in Agile teams, ensuring timely delivery of high-quality solutions. Her passion lies in leveraging robotics to tackle real-world challenges, particularly in autonomous vehicle applications.
