

Simulation Data Analyst

Location: Leipzig, Germany | Type: Full-time | Level: Mid-level | Salary: 60,000 - 80,000 EUR/year | Track: Simulation

About the Role

Join the Simulation team at BMW Group as a Simulation Data Analyst. In this role, you will analyze and interpret complex simulation data, turning insights into actionable recommendations for optimizing automotive processes. Your work will directly contribute to the refinement of our production and design systems.

You will collaborate with engineers, data scientists, and project managers to deliver impactful solutions. This is a challenging yet rewarding role for someone passionate about leveraging data to drive innovation in the automotive industry.

Requirements

- 3+ years of experience in data analysis
- Proficiency in Python, R, or MATLAB
- Strong knowledge of simulation frameworks
- Excellent data visualization skills

Nice to Have

- Automotive or manufacturing experience
- Familiarity with digital twin concepts
- Experience with SQL or NoSQL databases
