

Technical Stack for Backend Development

Track: Backend | Document Type: Technical Stack

The backend development track at BMW Group leverages robust technologies to build scalable, secure, and high-performance systems. Interns will work with programming languages such as Java, Python, and Kotlin, along with frameworks like Spring Boot and Flask. The program emphasizes cloud integration using AWS, Azure, or Google Cloud Platform and database management with PostgreSQL and MongoDB. Microservices architecture and containerization tools like Docker and Kubernetes are integral components. Interns are expected to familiarize themselves with CI/CD pipelines and APIs to ensure smooth system interoperability. This track provides a comprehensive backend development environment tailored to BMW Group's industry-specific needs.
