

Overview of Robotics Internship Program

Track: Robotics | Document Type: Overview

The Robotics internship program at BMW Group focuses on developing intelligent robots for manufacturing and logistics applications. Interns collaborate with experts in mechatronics, computer vision, and control systems to enhance robotics functionalities. The program aims to integrate cutting-edge technologies like machine learning and IoT into robotics solutions. Interns are involved in testing prototypes, optimizing algorithms, and ensuring system reliability. This track provides exposure to the entire lifecycle of robotics development, from concept to deployment. Interns gain hands-on experience with advanced equipment, fostering skills that align with BMW Group's commitment to innovation in automation and mobility.
