

Technical Stack for AI Internships

Track: AI | Document Type: Technical Stack

AI internships at BMW Group involve working with state-of-the-art technologies and frameworks. Interns are expected to use Python and R for data analysis and modeling, with additional exposure to TensorFlow and PyTorch for deep learning applications. Familiarity with libraries such as Scikit-learn and OpenCV is advantageous. Cloud platforms like AWS and Azure are utilized for scalable AI model deployment. Interns also work on data preprocessing using pandas and NumPy, ensuring datasets are optimized for training. Development environments like Jupyter Notebook and VSCode are standard for AI projects. BMW Group's AI initiatives emphasize innovation, scalability, and precision in applications.
