

Expectations for Simulation Interns

Track: Simulation | Document Type: Expectations

Interns in the Simulation track are expected to model and analyze dynamic systems relevant to automotive technologies. Proficiency in tools like MATLAB and Simulink is crucial for creating simulations that reflect real-world scenarios. Interns should demonstrate a strong grasp of physics and mathematics, enabling accurate representation of mechanical systems. Collaborative skills are essential for working with multidisciplinary teams, including engineers and data scientists. Interns are encouraged to think critically and propose optimization strategies based on simulation results. Documentation and presentation skills are vital for communicating findings to stakeholders. BMW Group values innovation, precision, and teamwork in simulation projects.
