

Zara Nakamura

zara.nakamura@example.com | Languages: English, Japanese, French | Track: AI | Experience: 3 years

PROFESSIONAL SUMMARY

Innovative AI researcher specializing in reinforcement learning and autonomous systems. Published 4 papers on multi-agent coordination at top-tier conferences including NeurIPS and ICML. Passionate about applying AI to real-world robotics and logistics optimization.

EDUCATION

MSc in Machine Learning, ETH Zurich (2023)

SKILLS

Python | PyTorch | TensorFlow | Reinforcement Learning | Multi-Agent Systems | Computer Vision | ROS2 | C++ | Docker | Kubernetes | MLOps | Research Writing | Public Speaking | Japanese (Native) | French (B2)

EXPERIENCE

- Developed a multi-agent reinforcement learning framework for warehouse robot coordination, reducing path conflicts by 40% in simulation. - Published 'Cooperative Navigation via Decentralized Actor-Critic' at NeurIPS 2023 workshop. - Built real-time object detection pipeline using YOLOv8 for autonomous forklift navigation, achieving 94% mAP on custom industrial dataset. - Designed and deployed ML inference microservice on Kubernetes handling 500 req/s with <50ms latency. - Mentored 3 junior researchers on RL fundamentals and experimental methodology. - Contributed to open-source ROS2 navigation stack with collision avoidance improvements.
